Travelers often pack lithium-ion battery power banks to charge their devices. Several airlines in Asia are tightening rules on carrying lithium batteries on planes following a series of overheating and fire incidents on board.

Are batteries allowed on a plane?

Lithium-ion batteries are allowed in your carry on based on watt hours (Wh). Batteries 0-100 Wh are allowed on passenger aircraft, 101-160 Wh require air carrier approval, and batteries exceeding 160 Wh are forbidden. There are additional safety requirements and limitations when placing batteries in checked bags or when

How many lithium ion batteries can a passenger carry?

In general, most airlines allow each passenger to carry a maximum of two lithium-ion power banks of 100-160 Watt-hour (Wh) into the cabin. However, most power banks on the market use the unit milliamperes per hour (mAh) to measure the battery's capacity. So, look for ones that are no more than about 43,000 mAh to comply with most airline rules.

Can you use a power bank on a plane?

The single aim: minimise the risk of battery fires disrupting flights. Notably, starting October 1, 2025, Emirates has banned the use of power banks while in-flight. Although passengers may still carry one power bank rated below 100 watt-hours, its use to charge devices or be recharged using the aircraft's power supply is strictly prohibited.
