# St Johns Solar PV Panel Supply

How many kWh does a solar installation produce in St John's?

An average solar power installation in St. John's will produce approximately 936 kWh for every 1KW of solar power installed. New solar technology has ensured that solar installations can reach their baseline production even in unfavorable sunlight conditions.

Can you use solar panels in St John's?

St. John's may not be known for its sunny weather, but that doesn't mean you can't harness the power of the sun with solar panels. In fact, even on cloudy days, solar panels can still generate electricity from diffused sunlight.

How does a solar system work in St John's?

Your solar system will connect to the grid in St. John's via the Net-Metering program. Excess energy you produce is credited by your power company at the retail electricity rate, balancing out your usage across day and night, as well as summer and winter months.

Should you install solar panels in St John's Newfoundland & Labrador?

In St. John's, Newfoundland and Labrador, there are several considerations when it comes to installing solar panels. The first consideration is the size of the system needed for your home or business. This will depend on factors such as how much electricity you use, the amount of available roof space, and your budget.
